

Eicosaderm[®] Technical Bulletin

High Potency EPA (Omega-3) product for use in Dogs and Cats

Features & Benefits

- Easy to use 8 oz. or 32 oz. liquid pump
- Trouble-free exact dosage: One pump (2 ml) per 20 pounds
- Formulated to deliver substantial levels of Eicosapentaenoic acid (EPA) and Docosahexaenoic acid (DHA): One pump per 20 lbs = 360 mg EPA & 240 mg DHA
- **Latest research suggests the Eicosaderm dose: 180 mg EPA per 10 pounds**
- **Improved odor and texture – putrecine extracted**
- **Highly palatable**
- **Guaranteed minimal mercury**
- Augmented with antioxidants: Vitamin E
- No sugars or starch
- 16.5 calories per pump
- Largest size available
- Excellent value

Why?

Dogs & cats have strict dietary requirements for certain polyunsaturated fatty acids that are important for maintaining skin and hair coat conditions, reproductive function & tissue repair.

Current research shows that Omega-3 fatty acids also play an important role in mediating and regulating inflammatory, immune & aggregatory responses within the body. EPA is believed by experts to have a sparing effect on COX inhibitors/NSAIDS.

Omega-3 offers considerable potential for disease prevention and in the therapeutic management of a wide variety of clinical disorders.

Subsequently, Omega-3 supplements have been used in veterinary trials, predominately in animals with inflammatory and immune-based conditions, with very favorable clinical responses.

Omega-3 supplements may be beneficial to the following conditions:

- **Dermatologic Diseases:** Seasonal allergies, food allergies, flea bite allergy, seborrhea complex, pyoderma, dry & dull coats. They may help to support a healthy skin & coat.
- **Inflammation:** They may help to reduce inflammation.
- **Degenerative Joint Disease:** Hip dysplasia, arthritis
- **Neoplasia**
- **Thromboembolic Disease** (dogs)
- **Eosinophilic Granuloma Complex**
- **Behavioral Disorders:** They may help to improve neurologic development and cognitive ability.
- **Kidney, Liver, Bladder and Cardiac Problems:** They may help to support cardiac health, a normal heart rhythm and maintain normal renal function.
