

# MalAcetic® ULTRA

**Contains:** 1% Acetic Acid, 2% Boric Acid, 0.15% Ketoconazole, 1% Hydrocortisone.

**MalAcetic® ULTRA combines the ANTIPRURITIC effects of HYDROCORTISONE with the ANTIFUNGAL/ANTI-YEAST effects of KETOCONAZOLE, and the ANTIMICROBIAL effects of ACETIC and BORIC ACIDS.**

## MalAcetic® ULTRA Shampoo & Spray

Aid in the topical treatment of pyoderma and *Malassezia* as well as provides anti-itch relief that is often associated with these conditions. Spray is helpful for focal infections, such as hot spots and interdigital infections where frequent application is desired, but otherwise difficult. Acetic Acid makes the coat luxurious while enhancing the effects of the Ketoconazole.

*Hotspot before and after treatment with MalAcetic® ULTRA Spray*

**MalAcetic® Shampoo & Spray are available in 8 oz. bottles.**

## MalAcetic® ULTRA Otic

Assists In:

- 1) Initial Management of Disease
- 2) Prevention of Recurrence of Otitis

To assist in initial management of otitis externa with yeast/gram-positive bacteria<sup>1,2,3,4</sup> and inflammation, we recommend treating the ear(s) 1-2 times a day for 7-10 days.

Use of **MalAcetic® ULTRA Otic** should not stop once the infection has resolved, it should continue to help keep the dog comfortable and prevent recurrence. Leading dermatologists suggest that maintenance therapy for allergic dogs should not only contain components to prevent infection from returning,

but, just as importantly, a gentle anti-inflammatory to treat the process directly. Using **MalAcetic® ULTRA** regularly (1-2 times a week) not only treats and helps prevent recurrent infections but helps reduce pruritus associated with allergies.

We recommend long term cleaning of the ears of any dog with recurrent otitis externa. Aim to cleanse the ears 1-2 times a week on a long term basis to keep the pet comfortable.

**MalAcetic® Otic is available in 2 and 8 oz. bottles.**
